

Hemorrhage Control Skills Trainer-Classroom

The TraumaFX® Hemorrhage Control Skills Trainer - Classroom (HCST-C) is a medical intervention simulator designed to teach fundamental skills for tourniquet application and hemostatic wound packing. Anatomical fidelity and lifelike skin provide a powerful haptic training experience to develop familiarity and muscle memory for different interventions. The HCST-C is ideal for teaching learners how to make critical decisions such as the type of treatment to apply, then use anatomical landmarks such as the greater trochanter to perform proper interventions.

Rugged, Durable and Reliable

Each TraumaFX product is designed from the ground up for ruggedness and durability with careful consideration of materials and manufacturing processes to create products that last. They are water resistant and can be used in nearly any weather condition or environment, and can be transported in any vehicle or aircraft.

Key Features and Training Elements

- Amputation on left leg
- Compatible with a wide range of tourniquets, including junctional tourniquets
- Deep wound at the inguinal crease to practice hemostatic wound packing
- Deep wound on lower leg for hemostatic wound packing and/or tourniquet application training
- Injuries can be filled with simulated blood for a more realistic training experience
- Learn proper intervention techniques using anatomical landmarks
